The Acme Company
collects data
regarding their
Sales.

```
const sales = [
  { customerId: 1,
    orderId: 1
    total: 3 },
  { customerId: 2,
    orderId: 2,
    total: 4
  }
  . . . . . ];
```

they also have
data for
their customers

```
const customers = [
    { id: 1,
      name: 'moe' },
    { id: 2,
      name: 'larry' } ];
```

can you write a function
with the following signature

```
function generateCustomerSalesMap
    ( salesData, customerData)
```

which will return an
object where the keys
are the customer names
and

the values are the
total sales for that
customer.

example result
{ moe : 55,
  larry : 33,
  curly : 0 }

use mocha, chai for
some tests!!
